

SAGE

## Planting Guide:

**Scientific name:** *Salvia officinalis*.

**Plant Description:** Evergreen shrub, evergreen, with woody stems and greyish leaves. Slightly spicy flavor.

**Plant Dept:** 0.5cm

**Planting Distance:** 30cm x 25cm

**Plant Height:** 20-30cm

**Germination days:** 20-25 days

Seed per gram: 120 to 140 seeds per gram

How to plant:

Turn the soil at least 20 cm deep until it is loose, without the presence of clods.

To improve the soil, add manure and / or humus in the proportion of 10%. Mix NPK balanced fertilizer considering 300g for each 10m<sup>2</sup> of construction site. For planting in pots, use substrate and add 5g of fertilizer per liter of pot. Sow according to the table on the side. After planting, keep the soil and / or substrate moist, without soaking, for best results.
