PETUNIA
"Trilogy F1 Red"

PETUNIA
"Trilogy F1 Purple"

Planting Guide:

Family: Solanaceae

Scientific Name: Petunia x atkinsiana

Maturity: 55-60 Days After Transplanting (*days to bloom*)

Method of Planting: Direct seeded or Transplanted

Days From Sowing To Germination: 10-15 Days After Sowing

Days From Germination To Transplanting: 14-20 Days After Sowing

Days to Senescence from Bloom: 30-40 Days

NOTES:

- Make sure that your nursery is under full sun.
- Petunias are tolerant of heat so you don't have to water them regularly.
- Watering once a week should be sufficient.
- Removed sick/old flowers to prolong blooming.

Fertilizer Management:

Basal: Nutricote during transplanting

Basal: Complete (14-14-14) at 10g/pot
(14 DAT, 21 DAT, 35 DAT, 49 DAT)

Foliar: Manusol (20-20-20) at 2 tbsp/ 16 L of water
(10 DAT and 17 DAT)

Foliar: Manusol (15-15-30) at 2 tbsp/ 16 L of water
(from 25 DAT, apply on a weekly basis)

Foliar: Atonik at 10 mL/ 16 L of water
(Apply on a weekly basis)
