

Sangria Bicolor  
Yellow & Red

Fizz Grape

Fizz Peach

Fizz Strawberry

**Scientific Name:** *Salvia splendens*

**Size/Plant Habit Height:** 18"/ Width: 24"

**Novelty Characteristics:** Early, exceptionally floriferous, attracts hummingbirds, vigorous and long lasting.

**Market Use:** Mixed container, pot, garden

## CULTURAL RECOMMENDATIONS:

### Container Size:

**Sowing:** 200 Cell or larger seedling tray

**Finish Container:** 4 and 6 inch pots

### SEEDLING STAGE

**Germination:** Emergence 6 - 7 days, dibbled tray, cover seed with vermiculite approximately ¼" deep; 23.3°C for most of seedling life; seedlings can be cooled to 20 - 23.3°C through stages 3 and 4

**Days from Flower Setting to Flower senescence:** 4 to 5 weeks

### FINISHING

**Transplant:** 25 to 35 days after sowing

**Days to Flower After Sowing:** 55 – 65 days

**Temperature:** 65 to 75°F day / 55- 60°F night

**EC:** 1.0 - 2.25 mS/cm (pour thru method)

**pH Level:** 5.4 - 5.8

**Common Disease/ Pests:** Alternaria leaf spot/Aphids, spider mites, thrips

NOTES:

- After cotyledons have expanded, lower temperature to 65-68°F to reduce stretching
- Plugs best shipped between 41 and 54°F
- pH and EC should be monitored for this crop. Salvia is very sensitive to high salts, pH should not exceed 6.2
